SoundSlates

Soundslates social network development

Soundslates is the ultimate collaborative platform for anyone involved with the music industry. It helps talented musicians, producers, and promoters find one another and make great music together.
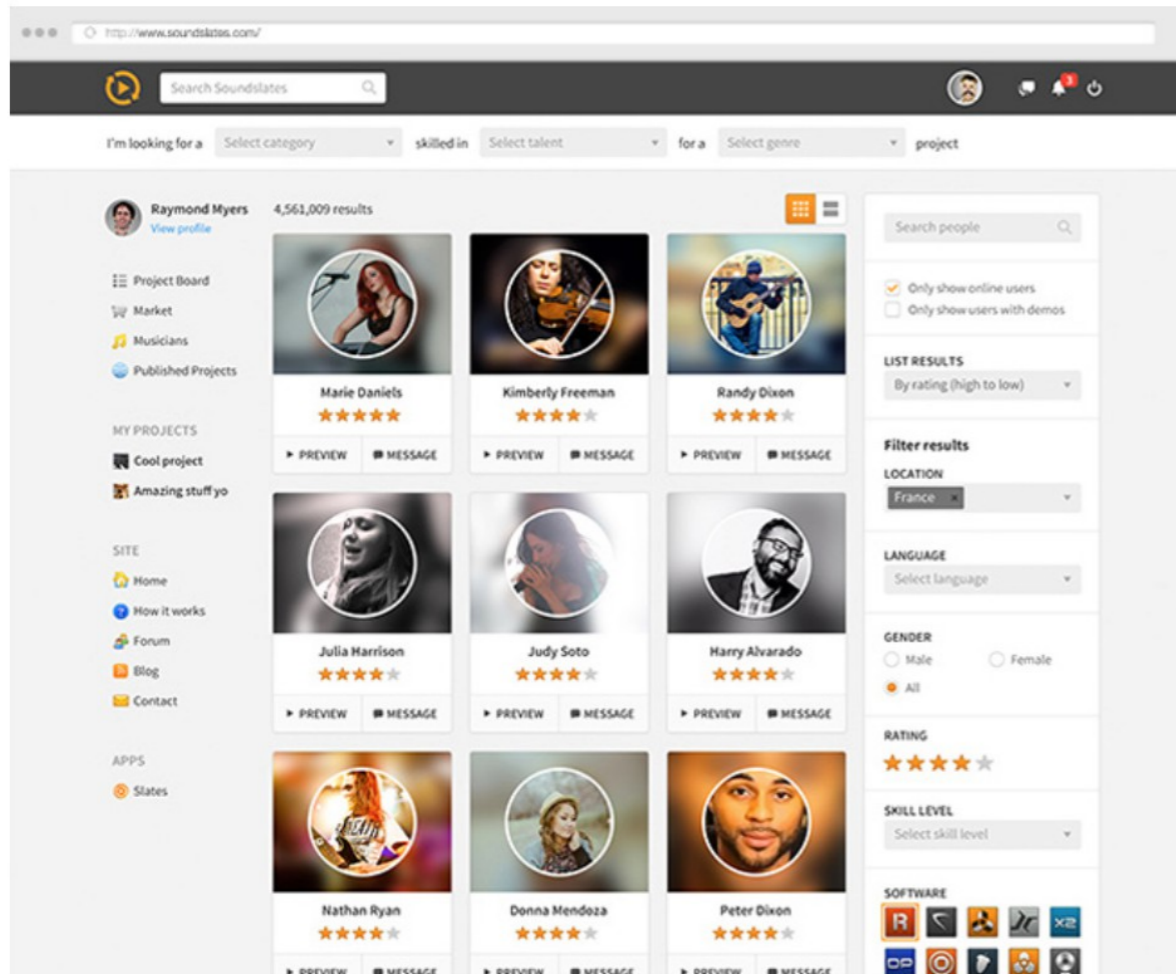

**DESCRIPTION** | We have participated in the development process.

—The musicians social network.

—Your Music Production Assistant.

—Your audio plugins now connected to your personal cloud.

—A Cloud integrated Digital Audio Workstation crafted by Soundslates.

SoundSlates

"Sounding" and "harmonic" design

Simple social network registration

Project progress notifications

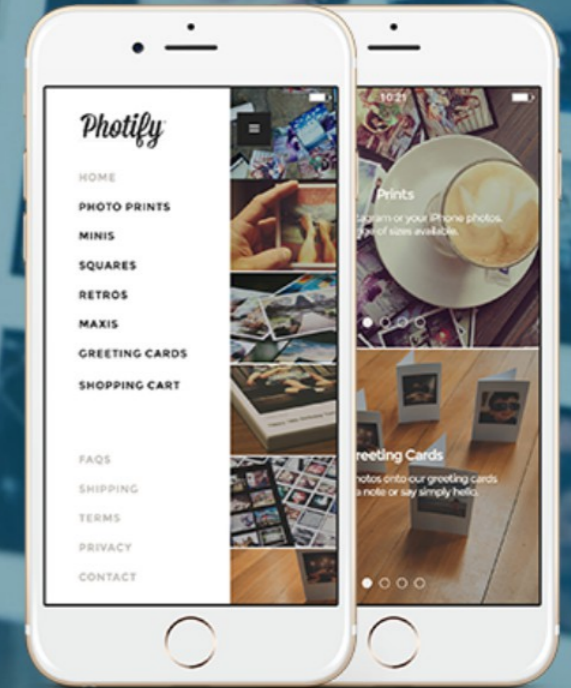

Welcome to SoundSlates

Colaboration space for musicians

Photify

Mobile Application Development Photify

Print photos from your phone and have them delivered to any country in the world. This app removes the barrier between digital and paper media and makes it easy to create physical copies of your favorite Instagram photos.

TASK | Create a user-friendly application that lets anyone print photos from Instagram. | **iOS**

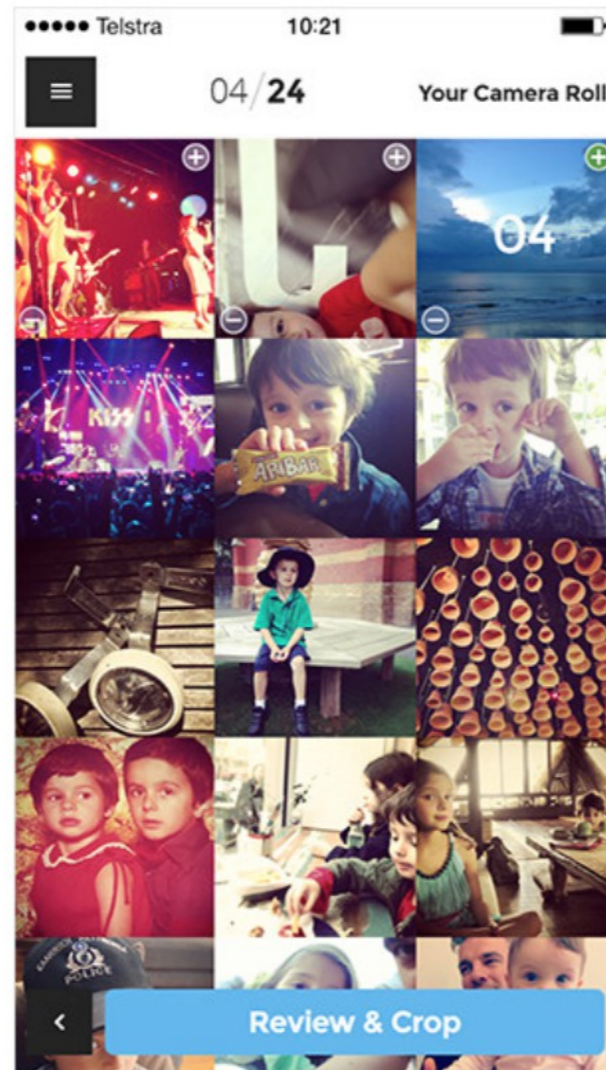

—Integrates with multiple Instagram accounts.

—Order printed photos directly from your phone.

—Display your favorite photos in your home.

Photify

Minimalistic design

A handy collage tool
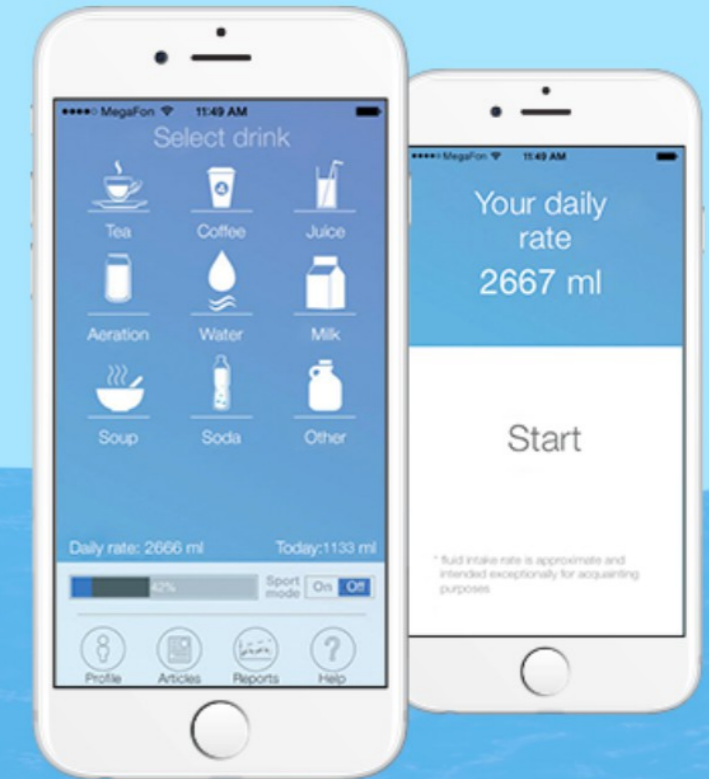

Simple ordering form and transparent pricing

Users see progress bars at every step of the way

Watermania mobile app development

Using the Watermania application, you can easily keep track of your water balance and what you drink every day. After all, water is not the only beverage we consume. How much coffee do you drink every month? What is the percentage of soda in your liquid intake? Our application will answer these questions and more.

| **TASK** | To create an application based on studied data and scientific experiments, and to develop a convenient interface and functionality. | **iOS** |

Data input can be realised in two ways:

Standard – quickly touching an element and entering the water volume through the keyboard.

Fancy – when holding a finger on the chosen element, 9 types of liquids transfer to 9 most commonly used volume values. Easily drag&drop liquid icon to water volume.

—A simple and minimalist design.

—The ability to control not only your water balance, but also all consumed beverages.

—An interactive indicator of liquid consumption versus the recommended daily intake.

—Automatic calculation of the recommended daily liquid intake based on individual parameters.

Waterman
ia

A fast data input method

Colorful and dynamic reports with
export to email option

Intelligent calculation
of consumption rate

Detailed specification
of daily activity

Watermania

Your daily drink tracker.
